**DETAILED ACTION**

***Response to Amendment***

1. The Examiner has carefully considered Applicant's remarks dated 02/09/06. Applicant is correct that the art was cited incorrectly and accordingly new art has been applied. All previous rejections/objections have been overcome via amendment. The only pending rejection is the one set forth below.

***Claim Rejections - 35 USC § 103***

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over USPN 3318063 issued to Stone et al. in view of USPN 6251995 issued to Hesse et al.

4. as stated previously USPN 3318063 discloses building insulation systems comprising a fibrous insulation blanket. Applicant's layers of decorative facer/adhesive/insulative core are present in the same invention. The only aspect not taught by said application is the use of polyolefin's in the decorative or outer room facing layer. This is remedied by USPN 6251995, which discloses using polyolefin sheets or coatings as decorative or outer layers in the building industry. A person having ordinary skill in the art at the time the invention was made would have found it obvious to have employed Hesses' polyolefin as the composition of choice in the decorative or outer layer of Stone. One would have been motivated to do this

in order to provide a composite, which would have high dimensional accuracy and thermal shock stability (column 2).
